

Senior Software Engineer

HomeSphere is seeking an experienced, motivated **Senior Software Engineer** to join our dynamic, high-performing team. Our team has built a true cloud enterprise platform, employing many Azure components including Azure ESB (Enterprise Service Bus), App Insights (Monitoring), API Management, blob storage, SQL Cloud Services, etc. If you are looking for a team that allows for individuals to utilize their technical experience to contribute towards overall success and where team members are motivated to explore and incorporate new and interesting technologies, this will be an exciting environment that will keep you interested. We offer a hybrid work from home schedule working in the office two days per week.

About Us

Founded in 1999 and based in Lakewood, Colorado, HomeSphere has built the residential construction industry's largest rebate management platform for local home builders, while providing digital customer acquisition services to building product manufacturers. HomeSphere is the ideal entrepreneurial company for people who want the stability that comes from having the financial resources of a mature company but the growth opportunities and working environment found in fast, flexible start-ups. We need great people to fuel our continued growth!

About You

You have a passion for product, application, services, and user interface development, with a strategic view towards the big picture of productized microservices and SaaS architectures.

You know .NET stack, Cloud (Azure preferred), C# experience as well as Angular experience (particularly with observables and RxJS) needed.

You want to work closely with the Scrum Master, Product Owner, Data Team, and the sprint developers / testers to deliver software product releases.

You are a strong individual contributor with ability to collaborate with other talented team members and communicate architecture and design to both functional and technical stakeholders.

Duties and Responsibilities

- Responsible for architecture, design, coding and delivery of application and infrastructure software components.
- Develop product application assets (modules, APIs, integration frameworks, related services, and workflows), including related application management tools and standards.
- Add functionality and new services to our existing microservices architecture and services suite.
- Collaborate with Product Management to understand business, user, and technical requirements to develop software that meets customer needs.
- Work collaboratively with the team to ensure consistent software design and development standards, best practices, and configurations across all architectural layers (application, information, security, infrastructure, etc.) and environments.
- Participate in agile ceremonies and processes and complete assigned user stories.
- Implement database solutions in conjunction with the database team.
- Incorporate unit tests into all code, supporting test automation.

Position Qualifications

- A bachelor's degree in a technical field or equivalent work experience; a master's degree or advanced course work preferred.
- A minimum of 5 years of work experience with hands-on development experience in enterprise software development languages, including .NET variants, preferably in a software product development (rather than custom) environment.
- 3+ years hands-on development experience with Angular including observables and RxJS.
- 3+ years in Cloud SaaS solutions development experience, with a preference for Azure tools.
- Experience with currently used toolsets: Azure DevOps (VSTS), Git, Salesforce, Azure, and MS Dynamics.
- Current, strong, detailed software design and programming skills, and understanding of modern standards, tools, and best practices.
- Experienced developing application platforms and workflows (and related data models) from immature starting points, utilizing enterprise tools, up to mature and supportable Products.
- Full stack developer skills.

- Demonstrated ability to influence in a team-oriented and collaborative environment.
- Ability to work independently with a high-level attention to detail

Salary and Benefits

This is a full-time position with an expected starting salary between \$110,000 - \$140,000 per year. HomeSphere provides its employees with a full range of benefits including medical, dental, and vision insurance, 401(k), disability insurance, life insurance, and paid time off. We offer a hybrid work from home schedule working in the office two days per week.
