

RESIDENTIAL VENTILATION SOLUTIONS

Greenheck is the worldwide leader in providing cost-effective, high-performance solutions for air movement and control. We work directly with you to design and deliver healthier, code-compliant ventilation installations.

We are helping a lot of High-Performance Home Builders and Contractors who are:

- Fed up with inflation and rising building materials costs.
- Facing project delays resulting from supply chain issues.
- Struggling to comply with today's stringent ventilation codes.
- Frustrated with the call backs associated with installing under-performing residential-grade ventilation fans.
- Seeking a way to meet their customers' increased need for healthier indoor air.

OUR SOLUTIONS

We provide high-performance, specification-grade ventilation fans and energy recovery ventilators (ERV) factory-direct to home builders and contractors.

- Our advanced ventilation fans and ERVs feature best-in-class efficiency to maximize energy savings and improve HERS ratings.
- Our exclusive control options provide the ability to set and measure the precise airflow (CFM) required to ensure code compliance and proper balancing.
- We help our clients design code-compliant ventilation systems with our industry exclusive eCAPS® Computer Aided Product Selection and Design Software.
- We provide the peace of mind that our installed ventilation fans deliver as advertised by testing and certifying performance (air & sound) at 0.4 in. wg and above.

THE GREENHECK DIFFERENCE

Greenheck continues to grow because we are very different from the residential-grade ventilation alternatives in the marketplace. We help our customers:

Combat Rising Costs

Greenheck's new factory-direct distribution model eliminates wholesale distribution, saving you overall material costs.

Avoid Supply Shortages

Working together, we can accurately plan our production, inventory levels, and logistics to meet your project needs and protect your construction schedule.

Meet Code Requirements

Meet code and eliminate callbacks by installing products designed, tested, and certified to move the specified amount of air that your project requires.
